

TURNING FOR HOME AND SHOP

In this demonstration, 12/4 (3 inch thick) hardwood is turned into a carver's mallet using dimensions from the 1907 book *Elementary Turning*. This is followed by turning a rolling pin using dimensions from the 1919 book *A Course in Wood Turning*.

The demonstration focuses on preparing the blanks, mounting considerations and the proper use of the turning tools, specifically the skew, when turning large between centers utility projects.
