

Woodturning Workshop: Spinning Top and Small Bowl In this hands-on class, we dive into the art of woodturning by creating two essential projects: a spinning top and a small bowl. Beginning with safety and tool orientation, we review the fundamentals of lathe operation, including tools used and basic techniques. The spinning top project introduces precision turning and basic design principles, allowing an exploration of form and balance. The small bowl project builds on this, incorporating techniques for cutting and refining curved surfaces. The workshop concludes with a completed spinning top and bowl, along with new skills and confidence in woodturning.
