

Practical Wood-Turning

Taking basic spindle and faceplate turning to a crisp and precise level, this traditional turning class has it all.

Refresh your spindle turning skills with a detailed turning exercise from 1908 (*Educational Woodworking for Home and School* by Joseph Park).

Combine faceplate and spindle turning by on-the-lathe joinery with a candlestick and turned candle project.

This class welcomes all skill levels, offering intermediate and advanced turners the opportunity to make clean cuts 'off the tool' with construction grade Douglas Fir.
