

Turning Class: **Three-Leg Stool**

This full-day class provides a skill building opportunity to create an heirloom gift of robust beauty and utility. This class puts into practice spindle turning and faceplate skills. Seat layout, angled leg hole drilling, turning of the seat and three legs are completed, and each leg is carefully fitted to a drilled hole and wedged for lasting joinery. Basic turning and shop tools make this project simple to repeat at home.

Turners with intermediate and advanced skills will find this project challenging and enjoyable. Beginning turners are welcomed but benefit by first taking a basic spindle and faceplate course.
