

ROLLING PINS

A Skew Centered Demonstration of Classic Woodturning Techniques

This demonstration showcases traditional woodturning methods and starts with a rolling pin from dimensions in the 1919 book *A Course in Wood Turning*. Following this, a cylindrical French style rolling pin and a smaller 'pastry' pin are turned.

Throughout the process, special attention is given to the correct handling of spindle turning tools, particularly the skew chisel. The demonstration also highlights techniques used in copy turning for precision and consistency.
