

# Subdue the Skew

## Practical Wood-Turning

While this traditional turning class has a focus on skew chisel technique, the exercise and project are designed to give the turner command of traditional turning tools.

Starting with a detailed spindle turning exercise from the 1908 high school textbook *Educational Woodworking for Home and School* by Joseph Park, the class then combines faceplate and spindle turning with on-the-lathe joinery.

This class welcomes all skill levels from new turners to experienced, offering the opportunity to make clean cuts 'off the tool' with tear-out prone construction grade lumber.
